Tarkiainen

CHALLENGE

Standing in a line that crawls
forward, and it seems to take
forever before it is your turn...
But how can we make queuing
faster and more pleasant?

SOLUTION

IoTitude is creating a scalable
queuing service using the latest
bleeding edge technologies like
serverless cloud functions, Firebase,
and PWA (Progressive Web Apps).
The main focus will be to deliver a
working product for mobile
devices, like phones and tablets.
